RE: US General Services Administration
Federal Center South
Building 1202 Waste Characterization and Disposal Project
Contract No. GS-P-10-10-LT-5125
EHSI Job No. 10121-01

Dear Ms. Saucier:

EHS-International Inc. (EHSI) is pleased to provide this letter report summarizing the waste characterization activities and the removal of hazardous and non-hazardous waste materials from Building 1202 at General Services Administration (GSA) Federal Center South for disposal or recycling. EHSI retained Kleen Environmental Technologies, Inc. (KET) to conduct waste characterization services, re-pack, and coordinate the transportation of waste streams to appropriate treatment/disposal or recycling facilities. The hazardous waste generator ID number for GSA Federal Center South is WA8470031891.

KET completed the waste characterization and re-packing for transportation of hazardous and non-hazardous materials located inside the southeast corner of Building 1202 on September 29 and 30, 2010. KET personnel separated, consolidated, and/or re-packed a majority of the waste materials based on labels affixed on the original containers that provided content information. A small percentage of waste stream consisted of unknown liquids and solid materials contained in various sized containers were characterized by a KET chemist on September 30, 2010. Based on its label providing content information or the waste characterization results, waste streams were separated, consolidated, and placed either into steel drums, fiber lab-pack drums, lidded 5-gallon plastic lab-pack pails, plastic-lined fiber cubic yard boxes, or kept in their original containers (e.g., used latex paint in 5-gallon plastic pails). A floor scale with a 5,000 pounds capacity was used by EHSI field personnel to verify the total weight of used PCB light ballasts and used batteries (i.e., lead acid, alkaline, lithium, and Ni-Cad), since disposal costs associated with these waste streams were based on weight.

- Environmental Engineering
- Earth Sciences and Mapping
- Industrial Hygienist Services
- Construction Management

Each waste stream with similar characteristics was placed in drums/containers on a wooden pallet and labeled according to its content. Of the waste streams in Building 1202, KET identified and characterized five major categories of waste streams including Chemical Waste, Electronic/Freon/Appliances, PCB Light Ballasts, Solid Waste, and Miscellaneous Waste. Most of the waste streams were picked up for transportation to appropriate disposal or recycling facilities on October 18, 19, and 21, 2010. Eight remaining drums containing used PCB light ballasts were picked up for transportation to a disposal facility for incineration on November 16, 2010.

A summary of the type of hazardous and non-hazardous materials identified and/or characterized, the number and type of containers each waste stream was packed or re-packed in, the date of which the waste stream was picked up for transportation, the final disposition of the waste stream, and the final destination of the waste stream for disposal or recycling is provided in Table 1 (Attachment 1). Copies of the hazardous and non-hazardous waste manifests are provided in Attachment 2 following this letter report. Note: some of the manifests attached to this report are not fully executed manifests until the waste is accepted at the designated treatment, storage, and disposal (TSD) facility. The manifests that are not fully executed as of the date of this letter report include the following waste streams:

- Waste latex paint, asbestos-containing materials, waste absorbent (used floor dry), diphenylmethane, concrete curing agent – Chemical Waste Management in Arlington, Oregon;
- Waste flammable paint and related materials – Rineco Chemical Industries, Inc. in Benton, Arkansas; and
- Used fluorescent light bulbs, batteries, and PCB light ballasts – Ecolights NW, Inc. and Total Reclaim, Inc. in Seattle, Washington.

If you have any questions concerning the provided information in this letter report, please feel free to contact Miguel Ortega or myself at any time.

Sincerely,

Diana M. Phelan
Senior Geologist

TABLE 1 – SUMMARY OF GSA FEDERAL CENTER SOUTH BUILDING 1202
WASTE CHARACTERIZATION AND DISPOSAL

**TABLE 1. SUMMARY OF GSA FEDERAL CENTER SOUTH BUILDING 1202
WASTE CHARACTERIZATION AND DISPOSAL**

TYPE OF WASTE STREAM	NUMBER AND TYPE OF CONTAINER	DATE PICKED UP FOR TRANSPORTATION	FINAL DISPOSITION OF WASTE STREAM	FINAL DESTINATION OF WASTE STREAM
Chemical Waste				
Used latex paint in 1 gallon cans (non-regulated liquids and solids)	Three (3) pallets, with a plastic-lined cubic yard box on each pallet	October 19, 2010	Solidification and landfill	Chemical Waste Management in Arlington, OR
Used latex paint in 5-gallon pails (non-regulated liquids and solids)	Three (3) shrink-wrapped pallets, with approximately 36 pails stacked on each pallet	October 19, 2010	Solidification and landfill	Chemical Waste Management in Arlington, OR
Used flammable paint and related materials in 1 gallon cans (alternative fuels)	Two (2) pallets with a plastic-lined cubic yard box on each pallet	October 21, 2010	Fuel blending for alternative fuel	Rineco Chemical Industries, Inc. in Benton, AR
Used flammable paint and related materials in 5-gallon cans (alternative fuels)	A shrink-wrapped pallet with approximately 36 pails stacked on the pallet	October 21, 2010	Fuel blending for alternative fuel	Rineco Chemical Industries, Inc. in Benton, AR
Used aerosol spray cans	A pallet with two (2) loose pack, 30-gallon fiber drums	October 21, 2010	Fuel blending for alternative fuel	Rineco Chemical Industries, Inc. in Benton, AR
Used/waste oil (passed Chlor-d-Tech test)	Two (2) pallets with three (3) 30-gallon and three (3) 55-gallon drums	October 18, 2010	Recycled oil	Marine Vacuum Services in Seattle, WA
